

Training

A3.Sys1 - Model Based Systems Engineering (MBSE)

Keyfacts

Duration

3 days

Language

English or German

Setting

On-site or remote

Target Group

System Architects, System Designer, and everybody who wants to learn about MBSE

Training Goals

The ultimate goal of this training is to learn the fundamental concepts of Model Based Systems Engineering (MBSE). A particular focus is put on developing Object-Oriented Architecture Models with SysML. The particular learning goals of this training are:

#1 - Fundamental Concepts of MBSE

Participants know the fundamental concepts of MBSE, covering the role of models in context of engineering and the idea of organizing different models within a generic modeling stack.

#2 - Object Oriented Analysis and Design

Participants know how to pursue a System Decomposition and Composition of System Architecture according to established architecture development models

#3 - Fundamental skills for modeling with SysML

Participants learn how to work with Computer Aided Software Engineering (CASE) tools and how to develop architecture models with SysML

Training Content

Introduction to MBSE

- Utilization of models to manage complexity: From Document-Centric to Model-Based
- Integrating Models: The generic Modeling Stack

Object Oriented Modelling

- Object oriented Analysis and Design
- Working with Object Models: Decomposition and Composition

Introduction to SysML

- What is SysML?
- Diagrams, Model Elements and Model Development

Computer Aided Systems Engineering (CASE) Tools

- What is a CASE Tool?
- Working with CASE Tools

Fundamental Modelling Approach with SysML

- System Decomposition
- System Composition
- Functional Modeling

Training Content	System Decomposition <ul style="list-style-type: none">•Block Definition, Composition, and Analysis•Properties•Some hints on model organization System Composition <ul style="list-style-type: none">•Intrnal Block Diagrams•Interfaces and Ports•Connectors and Item Flows Functional Modelling <ul style="list-style-type: none">•Function Modelling: The FAS concept•Parametric Diagrams Introducing MBSE in organizatons <ul style="list-style-type: none">•Challenges along the way•Change-Management: Small steps pave the way
Learning Methods and Didactics	Theory Inputs and practical hands-on modelling exercises to develop your first SysML Model

Your Benefit

Everyone is aware of the challenges introduced by document-centric approaches. However, the entry barrier into the world of Model Based Systems Engineering is high. This training provides a smooth entrypoint into the fundamental concepts of MBSE and the practical application

Your Trainer

FH-Prof. Dr. Christian Neureiter
neureiter@successfactory.cc

Christian is Professor at the School of Information Technology and Digitalisation at Salzburg University of Applied Sciences. As head of the "Center for Dependable Systems Engineering" he is an expert in this field and has profound knowledge on the matter.

Asides his academic role, Christian has 10+ years of experience as consultant and trainer

at the Successfactory Consulting group with a particular focus on Leadership, Software, and Systems Engineering related topics.
